Saif Haque

Senior Software Engineer at PayPal
Bengaluru, Karnataka, India

Summary

Senior Software Engineer (SDE-3) at PayPal with 4.5+ years of experience building scalable, high-performance backend systems. I specialize in designing and developing robust software solutions that are efficient, maintainable, and aligned with business goals. With a strong foundation in backend engineering, I bring deep expertise in crafting clean code, optimizing system performance, and collaborating across teams to drive product success. I thrive in fast-paced, innovation-driven environments and enjoy solving complex problems that deliver real-world impact. Passionate about continuous learning and staying current with evolving technologies, I'm always eager to take on new challenges and contribute to products that matter.

Experience

PayPal

Senior Software Engineer

January 2025 - Present (1 year 6 months)

Acko

Software Development Engineer

July 2022 - January 2025 (2 years 7 months)

Payout Revamp – Revamped the payout flow by integrating vendor webhooks, callbacks to LOB via SQS, and retry mechanisms. Refactored the codebase to introduce extensible APIs, improving retry logic and enabling support for multiple vendors without modifying core logic. Reduced payout TAT to under 10s for 82% of cases and under 1 min for 85%. Introduced a polling API to prevent duplicate payouts and enhanced logging to proactively identify potential failures.

Recurring Payments – Designed and implemented recurring payments, including manual payment, refund, and mandate flows. Defined API contracts and database schemas, ensuring testability, maintainability, and seamless

integration with downstream services. Enabled monthly payments for over 50% of health retail policies, with life recurring payments also active.

Refund Recovery Payout – Developed the refund recovery payout flow to handle failed refunds by automatically initiating payouts. Improved error handling and reduced manual intervention, ensuring smooth deployment and integration. Enhanced logging and monitoring to identify edge cases and improve system stability.

OneView Dashboard – Created the OneView Dashboard to consolidate payment details and streamline query resolution. Reduced tech intervention by enabling self-serve query resolution and improved understanding of failure scenarios, enhancing operational efficiency.

Credit Profile Merging – Implemented the credit profile merging process to maintain data consistency and reduce duplication. Ensured seamless integration and backward compatibility, improving data integrity and reliability.

Finsights FIP – Built a Financial Information Provider (FIP) system to deliver customer insurance data to FIUs per ReBIT guidelines, ensuring compliance and high availability. Integrated with multiple insurance lines of business to ensure comprehensive data coverage.

Samsung Electronics

Software Engineer

February 2021 - July 2022 (1 year 6 months)

Samsung Cloud & Smart Switch - Worked extensively on the backup and restore feature for Samsung Cloud and Smart Switch applications across mobile phones and smartwatches. Improved data synchronization processes and ensured data integrity during cloud and device migrations. Optimized core functionality to handle large data transfers seamlessly, enhancing the reliability of backup and restore operations.

Database Optimization - Improved the performance of SQLite interactions by refining query execution and optimizing data models. Reduced query execution time and ensured data consistency across devices, enhancing the efficiency of backup and restore operations.

Security and Data Integrity - Implemented security enhancements to protect user data during backup and restore processes. Ensured compliance with

industry standards by incorporating encryption and secure storage practices, safeguarding sensitive information during cloud sync and device migrations.

Cross-Team Collaboration - Collaborated with multiple stakeholders to identify and resolve performance bottlenecks, ensuring smooth deployment and seamless integration with other system components. Provided valuable insights to improve overall system efficiency and user experience.

System Stabilization - Resolved a high volume of critical bugs, focusing on improving stability and reliability. Enhanced error handling mechanisms and optimized data synchronization processes, reducing failure rates and improving overall system performance.
