Introduction to Cloud Computing

Devesh Jangir

Software Engineer @PayPal • Android & Backend Developer • IIIT
Sonapat'25
Churu, Rajasthan, India

Summary

I'm a Software Engineer passionate about building scalable, reliable backend systems and user-friendly web applications. I recently graduated with a B.Tech in Information Technology (CGPA 9.30) from IIIT Sonapat, and gained hands-on experience through internships at PayPal and uSthaan Solutions, contributing to high-impact projects in performance optimization, observability, and system architecture.

At PayPal, I worked on tech-excellence initiatives — analyzing and improving Customer Perceived Latency (CPL) and building observability dashboards to enhance system reliability. At uSthaan, I designed scalable backend services and improved code modularity to support real-time order processing across platforms.

I actively explore new technologies and stay current with industry trends, with particular interest in backend engineering, distributed systems, and cloud-native development.

Always ready to connect with like-minded people and how we can achieve great things together.

Core Skills:

Backend Development | System Design | API Development
| Observability | CI/CD | Testing & Automation | TypeScript |
JavaScript | Node.js | ReactJS | Spring Boot | AWS | DynamoDB |
Datadog | Mocha | Chai | OpenTelemetry

Experience

PayPal

Software Engineer
July 2025 - Present (1 year)
Bangalore Urban, Karnataka, India

Training & Placement Cell IIIT Sonapat
Coordinator
June 2024 - July 2025 (1 year 2 months)
Sonipat, Haryana, India

uSthaan Intergrated Solutions
Software Engineer Intern
November 2024 - May 2025 (7 months)
Mumbai, Maharashtra, India

Contributed to the development and optimization of backend systems powering high-traffic platforms in a fast-paced setup.

- Designed and deployed scalable backend services using TypeScript, Node.js, DynamoDB, and AWS, improving API performance and reducing latency by 30%.
- Abstracted legacy core entities to enhance code modularity and reusability, speeding up future development.
- Streamlined backend logic, reducing code duplication and improving data consistency, resulting in less debugging effort.
- Increased test coverage from 55% to 85% with comprehensive unit/integration tests using Mocha, Chai, and Sinon, cutting production bugs by 50%.

PayPal
Software Engineer Intern
June 2024 - August 2024 (3 months)
Bengaluru, Karnataka, India

Worked on tech-excellence projects to improve observability and performance of key components.

- Led the integration of observability dashboards into Datadog, improving error detection by 25% and boosting system reliability.
- Integration of Datadog optimized data storage (saved terabytes), contributing to faster platform performance and better scalability.

- Defined and implemented Service Level Objectives (SLOs) for availability and latency, increasing system availability and helping monitor budgets.
- Created custom metrics and dashboards using OpenTelemetry and Datadog, delivering deep business insights and customizable views.
- Implemented multiple filter attributes to enable customisable dashboard views tailored to user needs.
- Analysed Customer Perceived Latency (CPL) for multiple routes.
