Cardiovascular Disease Risk Assessment using Machine Learning

Nikkila Prakash

Software Engineer at PayPal
Chennai, Tamil Nadu, India

Summary

Software Engineer with 2.5+ years building privacy-compliant, large-scale distributed systems at PayPal serving millions of users globally.

Patent inventor and published researcher (IEEE).

Core Expertise:

- Distributed Systems
- Large-Scale Backend Development (Java, Spring Boot)
- Privacy Engineering & Compliance
- LLM Applications & Multi-Agent Systems
- Cloud Infrastructure (AWS)

Impact Highlights:

- Filed a patent via PayPal.
- 12x Recognition Awards: For innovation and cross-functional leadership at PayPal.
- Won Code.AI enterprise-wide hackathon for privacy compliance innovation.

Research & Academic Background:

- First Author, IEEE Publication: Cardiovascular disease risk assessment using ML.
- CGPA 9.45/10.0, First Class with Distinction.
- Nominated for Best Outgoing Student.
- ACM-W Council Member.

Leadership & Mentorship:

- Mentored 8 engineers (5 interns, 3 recent graduates).
- Led technical integration for 17 consent types across product ecosystem.
- Organized educational workshops on blockchain and Web3 for university community.

Currently:

Building next-generation privacy infrastructure at PayPal, with interests in AI-driven automations, distributed systems optimization, and privacy-preserving machine learning.

Experience

PayPal

Software Engineer - CL5

July 2023 - Present (3 years)

- Building PayPal's Customer Choice and Consent Management Platform, managing consents and policy decisions for PayPal, Venmo and Honey across the Americas, Europe, and APAC.
- Filed a patent demonstrating research innovation in applying AI to software systems at scale.
- Developed REST APIs and backend services using Spring Boot and Spring Batch for efficient data processing and system scalability.
- Engineered LLM-powered conversational interface (Privacy MCP Server) for consent management.
- Received 12 recognition awards for demonstrating innovation, technical excellence, and cross-functional collaboration.
- Led technical integration for 17 consent types enabling rapid deployment of new privacy requirements.

PayPal

Software Engineer

August 2022 - January 2023 (6 months)

- Built large-scale web crawling automation script, processing 500K+ URLs for automated cookie classification supporting European regulatory compliance.
- Transitioned to full-time Software Engineer role upon graduation, demonstrating strong performance and technical impact during internship

The Sparks Foundation

Web Development Intern

February 2022 - March 2022 (2 months)

- Implemented payment processing functionality using standard web technologies
- Integrated social media sharing capabilities across web platform
- Gained foundational experience in full-stack web development

F13 Technologies

AWS Cloud Intern

September 2021 - December 2021 (4 months)

- Explored AWS services (S3, EC2, RDS, Aurora) for business use cases
- Gained foundational cloud computing experience

Education

SRM University

Bachelor of Technology - BTech, Computer Science · (2019 - 2023)
