Sakthi Ganesh

Software Development Engineer at Amazon
Virudhunagar, Tamil Nadu, India

Summary

As a highly motivated software engineer, I have a strong dedication to lifelong learning and professional development. A strong foundation has been given to me through my education, which includes an MSc in Software Systems from PSG College of Technology. I have developed my skills in a variety of programming languages, including Python, C++, C, Java, Kotlin, Groovy, PHP and Javascript, as well as tools like AWS, Docker, Git, Postman, and frameworks like Google Guice, Mockito, and Frappe. My interest in databases has always been strong, therefore this may be the cause of my improved ability to deal with SQL and No-SQL databases like SQL, SQLAlchemy ORM and MongoDB.

I entered the software industry as a backend developer at Anand Rathi Wealth Limited, a Fintech firm with headquarters in Mumbai that creates tools to give customers the finest investment plans. I created modules for structured products throughout my six-month internship, which act as the foundation for many Anand Rathi businesses. These modules were created with Python, SQLAlchemy ORM, and AWS Lambda.

I later worked for Cogos Technology in Bangalore as part of my summer internship; the company's mission is to revolutionise the logistics industry by building a strong supply chain network powered by technology. I had been working to adjust a customer relationship module to the organization's requirements during this journey. The CRM was developed with the help of the frappe framework and then containerized with Docker.

Working as an software development engineer intern for Amazon's Digital Payments and Emerging Mkts division was my most recent exposure with the software industry. A rate limiter feature that prevents downtime brought on by client faults was successfully deployed as part of the internship project in the Fargate service owned by the team. Additionally, by utilising the Cloud Development

Kit to build the services infrastructure on AWS, other crucial features were delivered. Also, had the exposure to incorporate Unit and Integration Tests.

I am now actively seeking a challenging and congenial role where I can leverage my expertise to drive mutual growth and contribute to organizational success. If you are looking for a passionate and dedicated software engineer, Please feel free to reach out to me at 'gsakthiganesh5@gmail.com" or connect with me on LinkedIn.

Experience

Amazon

Software Development Engineer

March 2024 - Present (2 years 4 months)

Chennai, Tamil Nadu, India

Predigle

Full Stack Developer

August 2023 - March 2024 (8 months)

Chennai, Tamil Nadu, India

Amazon

Software Development Engineer Intern

January 2023 - June 2023 (6 months)

Chennai, Tamil Nadu, India

As a intern of Amazon's Digital Payments and Emerging Markets organization, the following were incorporated as part of the intern project.

- A rate limiting feature that prevents outages brought on by client errors was successfully

implemented in the Fargate service owned by the team.

- Delivered other critical features as part of MAWS to NAWS migration.

- Unit and Integration tests were also incorporated ensuring integrity

Cogos Technologies Pvt Ltd

Software Developer

June 2022 - July 2022 (2 months)

Bengaluru, Karnataka, India

AnandRathi Wealth Limited

Back End Developer
May 2021 - November 2021 (7 months)
Mumbai, Maharashtra, India
