Prasanta Roy

Engineer @ Microsoft
Hyderabad, Telangana, India

Summary

I'm a results-driven engineer with close to 6 years at Microsoft, building large-scale, cloud-based solutions across security, compliance, and infrastructure. I've led key features in M365 DLP, worked on Kubernetes migrations, and contributed to multi-cloud platforms. With an M.Tech from IIT Guwahati and a strong foundation in system design and full-stack development, I'm passionate about solving complex problems and driving innovation through scalable engineering.

Experience

Microsoft

7 years

Software Development Engineer 2

March 2022 - Present (4 years 4 months)

IDC Hyderabad

- Improved reliability of Web App and services by implementing enhancements.
- Platformized API calls for better efficiency and scalability.
- Currently leading efforts on Azure Kubernetes Service for modernizing service infrastructure at Microsoft IDC Hyderabad.

Software Development Engineer

July 2019 - March 2022 (2 years 9 months)

Hyderabad Area, India

Led migration and enhancement of legacy Protection Center DLP to advanced New Modernized Compliance Center M365-DLP within Microsoft Information Protection (MIP) domain.

Introduced multiple innovative security features, reducing data loss risk for clients, alongside active involvement in onboarding new workloads under DLP umbrella.

Implemented proactive DLP Alerts, from configuration to data-driven decision-making, ensuring robust data protection and client security in dynamic digital environments.

IBM

Research Intern

May 2018 - July 2018 (3 months)

Bengaluru, Karnataka, India

Watson Visual Insight

Watson Visual Insights, an IoT4Mfg solution, utilizes machine learning algorithms to detect defects using image data. However, its limitations include only accepting relevant images, lacking video input support, and the absence of pre-processing services. The project's objective is to address these shortcomings by developing services for video input and image enhancement. This initiative seeks to enhance defect detection accuracy, particularly in obstructed environments, and significantly improve the solution's effectiveness across various industries reliant on image data analysis.

Education

Indian Institute of Technology, Guwahati

Master of Technology, Computer Science · (2017 - 2019)
