Villesh Raj Purohith

Software Engineer @ Maersk | Building Scalable Distributed Systems | Java, Spring Boot, Kafka | Ex-UBS
Bengaluru, Karnataka, India

Summary

Backend Engineer with 3+ years of experience designing and building scalable distributed systems in high-performance environments. Currently a Software Engineer (JL3) at Maersk, working on building reliable, production-grade backend systems using Java, Spring Boot, event-driven architectures, and cloud-native practices. Previously at UBS, where I improved API performance by 26%, engineered microservices eliminating 720K+ manual operations annually, and built Kafka-based automation workflows for global onboarding systems. I enjoy solving complex system design challenges, optimizing performance at scale, and building clean, maintainable backend architectures. Core Strengths: • Microservices & Distributed Systems • Java, Spring Boot, REST APIs • Kafka & Event-Driven Architecture • Performance Optimization • System Design & Backend Automation Always open to discussions around scalable architecture and high-impact engineering problems.

Experience

A.P. Moller - Maersk
Software Engineer II
February 2026 - Present (5 months)
Bengaluru

- Building scalable backend services supporting global logistics and supply chain workflows.
- Designing high-performance REST APIs using Java and Spring Boot within microservices architecture.
- Working on distributed systems with emphasis on reliability, observability, and fault tolerance.
- Collaborating across product and platform teams to deliver production-grade solutions at enterprise scale.

UBS

Software Engineer

August 2023 - January 2026 (2 years 6 months)

Pune, Maharashtra, India

Software Engineer — UBS

Backend engineer building scalable onboarding services using Java, Spring Boot, Struts, JSP and distributed systems. Improved performance, automated workflows, and delivered high-impact backend features used across global onboarding teams.

Key Highlights

- Improved API performance by 26% by optimizing service architecture and reducing latency.
- Built scalable backend modules and REST APIs aligned with business workflows and Agile practices.
- Collaborated with cross-functional teams to deliver reliable, production-grade solutions.

Projects

Subsequent Account Optimization (Aug 2025)

- Integrated internal KYC services to automate checks and remove redundant steps.
- Achieved 15% faster account processing and reduced manual interventions.

Client Onboarding Kafka Integration (Mar 2025)

- Built a Spring Boot + Kafka microservice automating onboarding for low/medium-risk accounts.
- Eliminated 720K+ manual emails/year and cut onboarding lead time significantly.
- Designed case-based workflows with real-time Kafka updates and automated case closure.

Document Viewer API Migration (Oct–Nov 2024)

- Migrated 8 Apigee APIs to Azure API Management, integrating with AAD-based secure document viewer.
- Ensured smooth rollout with API Gateway + Content Mgmt teams.

Banking ChatBot (Jan–Feb 2024)

- Built a Spring Boot chatbot automating mainframe data retrieval; reduced fetch time by 30%.
- Added JWT auth, improving internal testing efficiency and secure access.

Education

Visvesvaraya National Institute of Technology (VNIT), Nagpur
Bachelor of Technology - BTech, Computer Science · (July 2019 - May 2023)
