Sanjay Mahaveer Kona

SDE 3 at Paypal
Hyderabad, Telangana, India

Summary

I help startups and businesses design, build, and scale modern cloud-native applications and distributed systems. With 7+ years of experience as a Full Stack Engineer and Architect at PayPal, I specialize in building high-performance enterprise applications, scalable backend platforms, distributed systems, and reliable cloud-native solutions. I am a full stack software engineer having experience of designing and developing high performant, scalable, maintainable, user friendly solutions with greatest quality using cutting edge technologies. An individual contributor flexible with technologies and platforms and love to solve challenging problems. My expertise includes:

- Full-stack product development
- API architecture
- Cloud-native application design
- Distributed systems & event-driven architectures
- Performance optimization & scalability engineering
- MVP development for startups
- Enterprise platform modernization

My qualities as a person : Avid learner, Consistent performer, Passionate developer. Adaptable, Enthusiastic and Self-motivated. Great Team player, Keen observer with acute analytical capabilities. Excellent communication and Interpersonal skills. Result oriented. Love to solve problems and love working in challenging environments with strict deadlines. Strong leadership skills. Interested on : Careers in a progressive Organization that offers an opportunity to learn and enhance skills and abilities in the best possible way for achieving the company's goals.

Experience

PayPal
Software Development Engineer 3
September 2024 - Present (1 year 10 months)

Pegasystems
Software Engineer
October 2021 - September 2024 (3 years)

I am part of the core engine team in Pega which owns backend of Pega Launchpad. Pega Launchpad is a low code cloud native SaaS platform using which end users define workflows as per business requirements.

My Role:

My role involves scoping, analysis, high level and low level design, implementation, feature development, cross team collaborations, customer interactions, test driven development (TDD), unit testing, code reviewing, pair programming.

Leading the development from design, development to deployment and maintenance.

Driving the team in deliverables.
