Revant Tiwari

Software Development Engineer @ Amazon
Hyderabad, Telangana, India

Summary

Working on cutting edge tech at Amazon

Experience

Amazon

4 years 1 month

Software Development engineer
June 2025 - Present (1 year 1 month)
Hyderabad, Telangana, India

Designed and led the High-Level Architecture for a scalable event-driven feature using AWS DynamoDB, AWS S3 and AWS glue crawler, ensuring latency threshold saving 100k per month.

- Worked on Gen AI tools to help with the operational load, creating a tool that creates automated on-call reports that saved 40% of manual efforts
- Implemented Gen AI tools to automated day to day activities such as writing test case, analysing code bases saving 30% of development efforts leading to higher throughputs

Software Engineer

June 2022 - June 2025 (3 years 1 month)

- Implemented an automation script in Python to fetch data from tables that saved 70% of manual efforts done by engineers
- Worked on Route-Bot a Chatbot written in Python that used Natural Language Processing that takes the user input describing their issues and suggests them the appropriate team to cut the trouble ticket to, this decreased 40% of the wrong tickets cut to our team
- Worked on Backend code written in Java and Velocity to add new or fix existing components e.g fixing overlaps in labels, or adding new components to the labels, for a tier 1 service, having traffic over a 100,000 per day

Mad Street Den

Machine Learning Engineer

December 2020 - May 2022 (1 year 6 months)

- 1) Designed Database schema for a project and implemented it using AWS services like SQS Queue, Lambda, Redshift and Data Pipeline
- 2) Modified ResNet-18 architecture to implement "Early Fusion" i.e 3 images goes through ResNet-18 upto "layer 3" after that they were combined and passed through a 1x1 convolution and then the rest of the ResNet-18 layers

Offshore Software Solutions

Data Scientist

September 2019 - November 2020 (1 year 3 months)

- 1) Designed and implemented an end-to-end flow for a Image Classification Module which used a pre-trained RESNET-18 for an E-commerce app.
- 2) Setup WhatsApp bot for our E-commerce platform which the user interacts with to get deals and other information, using RESTful API and NLP techniques to obtain user intents
- 3) Developed a recommender system for an E-commerce website using Collaborative filtering and deployed as a RESTful service using Docker

KocharTech

Machine Learning Intern

January 2019 - May 2019 (5 months)

Amritsar, Punjab, India

- 1) Worked on PoseNet to find whether employees were making groups during work hours by analyzing feed from security camera

Pucho Technology Information Private Limited

deep learning intern

August 2018 - December 2018 (5 months)

Work from home

- 1) Developed Multi-Lingual sentiment analysis which was able to extract the sentiment of sentences from most of the languages

Mate Labs

Machine learning Intern

August 2018 - October 2018 (3 months)

bangluru

- 1) Worked on Hyper Parameter optimization using HyperOpt

2) Worked on Distributed machine learning using Dask

Education

GALGOTIA S COLLEGE OF ENGINEERING AND TECHNOLOGY,
GREATER NOIDA

Bachelor of Technology, Computer Science · (2015 - 2019)
