Sourav Dutta

Senior software engineer @ Amazon | ex-LinkedIn, PayPal
Bengaluru, Karnataka, India

Summary

Experienced Software Engineer with a demonstrated history of working in the internet industry. Skilled in Java, J2EE, Node.js, React.js, JavaScript and Spring boot. Strong engineering professional with a Bachelor of Technology (B.Tech.) focused in Computer Science & Engineering from West Bengal University of Technology.

Experience

Amazon

Senior Software Engineer
October 2025 - Present (9 months)
Bengaluru, Karnataka, India

Rippling

Senior Software Engineer
March 2025 - September 2025 (7 months)
Bengaluru, Karnataka, India

LinkedIn

Senior Software Engineer
April 2022 - February 2025 (2 years 11 months)
Bengaluru, Karnataka, India

- Created high scale snapshot and real time data pipelines to ingest LinkedIn jobs related datasets to search platforms. Used technologies like Spark, Apache Flink and Kafka.
- Created data specific custom string analyzers to optimally create search index tokens. This reduced the search index size from ~200GB to ~80GB.
- Developed JAVA based services to perform search operations on different entities. Designed modules to transform search tokens to a Elastic Query DSL like language.

- Built a complete search ecosystem for LinkedIn jobs related entities which brought down the 95%ile search latency from ~15s to 20ms.
- Devised scoring algorithm to accurately fetch an appropriate web crawler for a job source. This helped to onboard new clients without any human intervention. Reduced onboarding support tickets by 80%.
- Created backend API layers with JAVA and REST APIs for LinkedIn job segments metadata to perform CRUD and search queries. This enables different services to consume job segment related information.

PayPal

3 years 4 months

Software Engineer 3

January 2021 - March 2022 (1 year 3 months)

Bangalore Urban, Karnataka, India

- Created Spark jobs to process large user behavioral event datasets to generate smaller aggregated datasets. This reduced the query latency by 90% for queries like pageviews, unique users and other metrics. This also reduced the data storage by 75%.
- Designed and developed JAVA and Spring Boot based backend API layer to fetch user behavioral data from different data sources like Druid, Elasticsearch and other REST based services.
- Designed and developed a Kibana like tool using ReactJs and Looker APIs to query and visualize data from BigQuery tables by generating dynamic queries based on user inputs.

Software Engineer 2

December 2018 - January 2021 (2 years 2 months)

Bangalore

- Built UI components to visualize and generate reports based on user behavioral data using ReactJs and NodeJs. Added capabilities like page flow, funnel analysis, latency reporting etc.
- Worked on building a JavaScript library to collect different page load latency metrics for all PayPal web pages. This increased the page load time measurement accuracy and helped all PayPal teams to better their page load latency.

- Designed and developed a Node JS library with Selenium to provide capabilities to track page load latencies and report anomaly in pre deployment stages. This helped teams to restrict deployment of any new feature with unacceptable latency degradations.
- Designed and developed an alerting mechanism to detect spike in page latency and provide reports via email.
- Mentored junior engineers and interns to onboard the team and develop features with high quality coding principles.

Manhattan Associates

Software Engineer

April 2018 - November 2018 (8 months)

Bengaluru Area, India

- Worked as part of the transportation lifecycle management team. Owned the microservice that derives the optimal path for commercial vehicles to complete a shipment from many sources to many destinations.
- Created REST APIs to calculate the most efficient path between multiple stops considering factors like toll, material, vehicle type etc. Used technologies like JAVA, Spring Boot, Microservices, Eureka, Hystrix etc.

Wipro Digital

Project Engineer

July 2016 - April 2018 (1 year 10 months)

Bengaluru Area, India

- Developed a part of a web based, scalable banking platform to receive user details and push it to the verification pipeline using JAVA, Spring Boot, Micro Services.
- Created a Python and Flask based backend application to track and report the company wide revenue streams. This platform helped leaders to make better decisions and strategies for the company roadmap.
- Created a ReactJs and NodeJs based application to control scrum boards with voice commands. Used Google speech-to-text service to understand the intent of the user and apply rules based on that.

Education

West Bengal University of Technology

Bachelor of Technology (B.Tech.), Computer Science &
Engineering · (2012 - 2016)
