Paidipala Supraja

Software Development Engineer II @Amazon
Hyderabad, Telangana, India

Experience

Amazon

5 years 6 months

Software Development Engineer II

December 2022 - Present (3 years 7 months)

Hyderabad, Telangana, India

Software Development Engineer

August 2021 - December 2022 (1 year 5 months)

Hyderabad, Telangana, India

- Master of Delivery Award

- Guardian of Simplicity Award

As an SDE I at Amazon, worked on building scalable backend systems within the logistics domain, focusing on carrier onboarding, system integrations, and platform performance. Designed and developed RESTful APIs to onboard external carrier partners and integrate internal services, enabling secure and seamless file transfers via SFTP for both inbound and outbound workflows.

Led the integration of large-scale third-party shipping APIs by collaborating with external compliance platforms. This included implementing new API capabilities, supporting GET method handling and developing libraries for validating API interactions, streamlining the onboarding of national-level carriers.

To enhance system scalability and responsiveness, conducted performance testing on critical document transmission workflows and resolved latency issues affecting partner integrations. Additionally, built a reusable, multi-level caching library using annotations and aspect-oriented programming, which reduced cross-service latency and improved request throughput.

Reliability was further strengthened by implementing robust failure-handling mechanisms and enabling UI-based redrive functionality, allowing for more efficient recovery from operational issues. These initiatives contributed to

faster partner onboarding, improved data processing and greater system resiliency across Amazon's logistics infrastructure.

Software Development Engineer Intern

January 2021 - July 2021 (7 months)

Hyderabad, Telangana, India

Developed a modern, user-friendly web UI using React, focusing on reusability, dynamic rendering, input validation, and improved user experience. Implemented centralized screens to simplify operational actions that were previously manual and time-consuming.

Designed and integrated a chatbot-based interface to trigger operational workflows using serverless components. Implemented backend functionality to support retry, purge, and listing of failed operations using scalable cloud-native data stores and messaging systems, while ensuring data consistency and safe execution.

Gained hands-on experience with cloud-native architecture, serverless design, state management, and frontend frameworks.
