Certifications

Convolutional Neural Networks in TensorFlow
Introduction to TensorFlow for Artificial Intelligence, Machine Learning, and Deep Learning
Neural Networks and Deep Learning
Natural Language Processing in TensorFlow

Honors-Awards

2nd Runner up in Kotak Reign Hackathon
Semifinalist in Flipkart Grid 2021
Robothon Winner

Harshal Gadhe

Software Development Engineer at Amazon | IIIT Jabalpur '23
Hyderabad, Telangana, India

Summary

Software Development Engineer at Amazon specializing in high-availability distributed systems. Currently working in the Amazon Business 'Your Orders' team, which serves business customers handling millions of requests daily.

My work focuses on building resilient microservices and optimizing backend workflows to ensure a seamless post-purchase experience

Experience

Amazon
Software Engineer
June 2024 - Present (2 years 1 month)
Hyderabad

Spearheaded a critical architectural migration for the Amazon Business "Your Orders" page, leading a cross-functional team of 4 engineers to deliver a high-stakes system overhaul.

Engineered and deployed a new B2B-specific authorization logic, successfully transitioning global traffic from legacy systems to a modernized, secure framework.

Achieved ultra-low latency for authorization checks (targeting ~60ms), significantly improving system responsiveness and enterprise user experience.

Managed traffic for a service handling millions of daily B2B requests, ensuring zero downtime and maintaining 99.99% availability throughout the migration process.

Falistro
Software Development Engineer 1
August 2023 - June 2024 (11 months)
India

- Implemented automation of creation of GCP services which is a complete pipeline consisting of uploading code and creation of its docker image which is used to deploy cloud run service.
- Engineered secure authentication using all-auth Django library with JWT token for a crucial project, including the creation of low-fidelity mocks and writing unit tests with test coverage of 94%.
- Streamlined Algolia Search to enhance website search performance and user experience by decreasing the search time to 10ms and adding features such as autocomplete and search as you type.
- Utilized celery for running async tasks decreasing the load on the main thread, and writing cron jobs for syncing DB with Algolia to send data in a batch of 1k, decreasing the number of request calls.
- Optimized client landing page, reducing loading time by 50% through caching and JS/CSS optimization.
- Customized and integrated Plyr audio player for a tailored website audio playback experience.

Amazon

Software Development Engineer Intern

January 2023 - June 2023 (6 months)

Hyderabad

-Implemented microservice in Java for data extraction from documents by using serverless event-driven AWS architecture which used Lambda, SQS, Dynamo DB, DLQ, SNS, and S3 Bucket. Also designed low-level and High-Level designs as well as Database schema for the service. Saving more than 80% of the time that goes into certificate validation.

-Implemented the above architecture by using common CDK construct in typescript which decreases AWS resource creation time from 6-7 days to 1-2 days time.

-Enhance Amazon's internal website by using Django, and frontend technologies such as HTML, CSS, and Javascript.

Kaggle

Kaggle Expert

February 2021 - April 2022 (1 year 3 months)

Use the Tensorflow framework and Keras library to create notebooks on Deep Learning which might be real-world problems as well as data visualization.

The Sparks Foundation
Computer Vision Intern
March 2021 - March 2021 (1 month)

Education
