Asad Abidi

Software Engineer II @ Blinkit | CS, IIT Bhilai
Bengaluru, Karnataka, India

Summary

I'm a builder and experimenter at heart - always diving in to learn by doing, not just writing code but owning systems end to end. With over 3 years of experience, I've designed microservices, set up cloud infrastructure, and managed extensive fleets of compute instances, thriving on turning ideas into scalable, reliable systems that perform under pressure.

Holding a Bachelor's in Computer Science and Engineering from IIT Bhilai, I bring hands-on expertise in backend engineering, distributed systems, large-scale data workflows, and graph databases like Neo4j and ArangoDB. My focus is on building solutions that are not only reliable and maintainable but also engineered to scale rapidly with business needs.

Experience

Blinkit

Software Development Engineer II
September 2025 - Present (9 months)
Bengaluru

Prismforce

Software Engineer II
December 2023 - September 2025 (1 year 10 months)
Bengaluru, Karnataka, India

Product & AI Platform Engineering

- Designed Auto Cluster Mapping (ACM) to compute match scores between users and specializations, executed more than 25 billion nightly computations using distributed microservices (Node.js, Rust) with message brokers and orchestration, generating ~60GB of data daily and enabling sales to secure large enterprise clients.
- Built the SkillPrism AI Agent—a secure, low-latency multi-agent system (LangGraph, MCP, Azure OpenAI) for the MS Teams App Store. Handled

1000 RPS for 700K users with enterprise-grade access controls, driving a 44% DAU uplift.

- Built Prism Graph microservice using Graph DBs (Neo4j & ArangoDB), solved complex nested filtering use cases that weren't possible with traditional databases; enabled internal teams to run org-wide user skill tag queries at scale.
- Architected the PrismVault microservice to provide secure, low latency access to PII and identity data, built with Node.js, Redis, AWS Lambda, S3, integrated encryption and access controls; adopted across all internal teams as the standard PII access layer.
- Instrumented core services with metrics and alerts, minimized downtime by notifying developers via SMS/email.

Infrastructure & Cloud Operations

- Orchestrated high concurrency compute workflows using AWS ECS, SQS, EventBridge, and provisioned 50+ parallel containers with autoscaling and isolation to support critical data processing pipelines.
- Built a reporting pipeline using AWS Step Functions, AWS Batch Job, SQS, Lambda, enabled scalable, on-demand analytics delivery in ~10 min, reducing infra cost and improving stability for async report delivery.
- Migrated legacy ingestion to a secure event-driven model using AWS S3 Events and Lambda, automated large file encryption and S3 movement, removing manual developer intervention.
- Owned infrastructure lifecycle of the developed services via AWS CDK and serverless stacks, managed deployments, monitoring, and ensured production stability across environments.

ATONARP

Software Engineer

June 2022 - December 2023 (1 year 7 months)

Bengaluru, Karnataka, India

TOMIA

Software Engineer Intern

June 2021 - July 2021 (2 months)

Bengaluru, Karnataka, India

Education

Indian Institute of Technology, Bhilai

Bachelor's degree, Computer Engineering · (2018 - 2022)

RBK School
· (2004 - 2015)
