Aadhar Kansal

Senior Software Engineer at Blinkit | IIT BHU | Generative AI
Bengaluru, Karnataka, India

Summary

AI Engineer building and scaling generative AI products.

Experience

Blinkit

1 year 11 months

Senior Software Engineer

January 2026 - Present (5 months)

Gurugram, Haryana, India

Software Engineer

July 2024 - December 2025 (1 year 6 months)

Gurugram, Haryana, India

Alltius

AI Engineer

July 2023 - July 2024 (1 year 1 month)

Bengaluru, Karnataka, India

Architected a backend service using OOP & design patterns, enabling seamless integration of multiple LLMs across regions, reducing downtime by 99% and saving \$10K monthly.

Developed AWS Lambda functions for real-time SageMaker communication, optimizing API calls by 92% and cutting SageMaker costs by 85%.

Implemented hybrid search in Weaviate combining lexical & semantic search with BM25 ranking, improving retrieval accuracy by 38% on 20M+ documents.

Designed distributed Redis locks for atomic operations across servers, automating ingestion and streamlining onboarding, reducing developer effort by 90%.

Technologies: Python, FastAPI, Celery, Weaviate, AWS Lambda, AWS EC2, AWS SQS, AWS S3, MongoDB.

MatchPoint Solutions

Software Engineer

February 2022 - July 2023 (1 year 6 months)

- Developed social login authentication package which can be directly integrated with different authentication services.
- Handled backend system of the platform to allow crypto exchanges & wrote cron jobs to automate payment system.
- Migrated REST APIs to GraphQL based endpoints which improved the response time on complex queries by 19%.
- Used Django Tenants to implement backend system for a SAAS model & added multiple role access system feature.
- Exposure: Python, Django Rest Framework, Django Tenants, GraphQL, AWS Cognito, PostgreSQL

Dübverse

Software Engineer

September 2021 - November 2021 (3 months)

- Optimised video processing service by 33% using Multiprocessing in celery resulting in 19% faster video dubbing.
- Used celery chunks for multi-segment video processing and updated the database models to store these segments.
- Developed APIs for new features and integrated several services like Vimeo, Google Drive for better UX of product
- Migrated the server to Asynchronous Server Gateway Interface to handle multi-processing pools.
- Exposure: Python, Django, Django Rest Framework, Celery, PostgreSQL, AWS(EC2)

Viga Entertainment Technology

Software Engineer

April 2021 - August 2021 (5 months)

- Developed backend for centralized version control system and created a CLI tool to interact with it.
- Created an email microservice from scratch, integrated SSO, and deployed using E2 virtual machine on GCP.
- Implemented topological sort algorithm to ensure dependency conditions are satisfied and acyclicity is maintained
- Optimized the backend architecture (backend for frontend) using Gevent, making it 28% faster.
- Exposure: Python, Django, Django Rest Framework, Python Click, PostgreSQL, GCP

Education

Indian Institute of Technology (Banaras Hindu University), Varanasi
Integrated Dual Degree (B-Tech + M-Tech) · (2018 - 2023)
