Manash Ranjan Khamari

Principal Engineer | Full Stack · AWS · Kubernetes · AI | Flipkart · Quikr · Arcesium | 15+ Years Shipping Products That Scale
Bengaluru, Karnataka, India

Summary

15+ years of building things that scale.

I'm a Principal Engineer at Arcesium, where I work at the intersection of complex financial systems and emerging technology. Some of the impact-driven work I've been part of:

- Partnered with 10+ cross-functional teams to rebuild a high-traffic landing page, driving 30% growth in organic traffic while ensuring above-the-fold content prioritization and actionable data placement for end users.
- Migrated a critical wire transfer application from on-premise infrastructure to Kubernetes, enabling horizontal autoscaling and significantly reducing deployment overhead and operational risk.
- Offloaded compute-heavy background jobs to KEDA for a Tax application, resulting in a 25% reduction in infrastructure costs by scaling workers to zero during idle periods.

Currently exploring agentic AI integration within the financial services ecosystem, identifying opportunities to automate complex workflows and reduce manual intervention across critical business processes.

Over the years, I've worn many hats as a developer, tech lead, and architect across some of India's most recognized product companies: Flipkart, Quikr, and Movoto (one of the top real estate platforms in the US). What's stayed constant is my obsession with building products that are fast, reliable, and built to last.

What I bring to the table:

Full-stack depth across Node.js, React.js, Vue.js, JavaScript, Python, Java, Kotlin paired with strong cloud and infrastructure experience on AWS (EC2, S3, CloudFront, Lambda, Athena, ELB). I've worked extensively with MongoDB, MySQL, MSSQL, ELK Stack,

Docker, Kubernetes, NGINX, Firebase, and I take web performance and SEO seriously, not as afterthoughts, but as core product metrics.

A few things I've shipped that I'm proud of:

- Led the full engineering ecosystem around movoto.com, from microservices architecture to frontend performance to SEO strategy.
- Built Quikr's Real Estate vertical from the ground up.
- Contributed to Flipkart's checkout platform through their first Big Billion Day.
- Integrated a full payment gateway and EMI/subscription feature at Impelsys, earning Employee of the Quarter.

What drives me:

I believe the best engineers never stop being curious. I pick up something new every day. Right now, that's generative AI, agentic systems, and how LLMs can meaningfully change the way we build software.

Experience

Arcesium

Principal Engineer

October 2021 - Present (4 years 9 months)

Bengaluru, Karnataka, India

Arcesium is a financial technology firm backed by D.E. Shaw Group, providing data, analytics, and operational solutions to hedge funds, asset managers, and financial institutions.

As a Principal Engineer, I drive architecture decisions and hands-on engineering across a portfolio of critical financial applications, working closely with cross-functional teams to deliver reliable, high-performance systems at scale.

Key contributions:

- Spearheaded the end-to-end revamp of a core application powering 70% of the financial technology stack, delivering 50% cost reduction while introducing transformational features and cutting page load time significantly.

- Partnered with 10+ cross-functional teams to rebuild a high-traffic landing page, driving 30% growth in organic traffic while ensuring above-the-fold content prioritization and actionable data placement for end users.
- Migrated a critical wire transfer application from on-premise infrastructure to Kubernetes, enabling horizontal autoscaling and significantly reducing deployment overhead and operational risk.
- Offloaded compute-heavy background jobs to KEDA for a Tax application, resulting in a 30% reduction in infrastructure costs by scaling workers to zero during idle periods.

Led architecture and design decisions across multiple product tracks, ensuring scalability, maintainability, and alignment with long-term engineering goals.

Actively exploring agentic AI and LLM integration within the financial services ecosystem, identifying opportunities to automate complex workflows and reduce manual intervention across critical business processes.

Core stack: Node.js · React · TypeScript · Java · Kotlin · Kubernetes · KEDA · AWS (EC2, S3, CloudFront) · Generative AI · LLMs · MSSQL

Encora Inc.

5 years 8 months

Technical Architect

January 2021 - October 2021 (10 months)

Bengaluru, Karnataka, India

Movoto is one of the largest real estate platforms in the US, serving over 1 million users daily across a highly competitive market.

As a Technical Architect and Lead, I was deeply involved in shaping the engineering foundation of movoto.com, from microservices architecture to frontend performance to SEO strategy, helping the platform grow into a top-ranked real estate destination.

Key contributions:

- Architected and scaled a microservices ecosystem of 10+ services powering movoto.com, ensuring high availability and resilience for a platform handling 1 million daily users and 3 million bot crawls per day.
- Drove web performance to industry-leading standards, achieving Lighthouse scores consistently above 90 and search page load times under 200ms, placing Movoto among the fastest real estate platforms in the US.

- Contributed to 15-20% organic traffic growth through a disciplined SEO strategy built around the "3B" principle: better content, better metadata, and better performance, actively monitored via Google Search Console.
- Implemented end-to-end analytics instrumentation using Google Analytics and Google Tag Manager, enabling data-driven decisions across product, marketing, and engineering teams.

Worked across a diverse stack including Node.js, Vue.js, MongoDB, MySQL, MSSQL, ELK Stack, Firebase, Docker, and NGINX, with extensive use of AWS services including EC2, S3, CloudFront, Lambda, Athena, Lex, and CloudWatch.

Played a key role in establishing Movoto as the 3rd largest real estate platform in the US and 2nd largest in California during my tenure.

Core stack: Node.js · Vue.js · AWS · MongoDB · MySQL · ELK Stack · Docker · NGINX · Google Analytics · GTM

Technical Lead

April 2018 - January 2021 (2 years 10 months)

Bengaluru Area, India

Senior Software Engineer

March 2016 - April 2018 (2 years 2 months)

Quikr

Senior Software Engineer

March 2015 - March 2016 (1 year 1 month)

Bengaluru Area, India

Quikr is one of India's largest classifieds platforms. I joined during a pivotal period when the company was relocating its engineering base from Mumbai to Bangalore and building out its Real Estate vertical from the ground up.

As a Senior Software Engineer, I was one of the early engineers on the Real Estate team, contributing from the very first line of code to the day we went live.

Key contributions:

- Built Quikr's Real Estate vertical from scratch, taking ownership across the full development lifecycle from architecture decisions and coding to testing, deployment, and post-launch stability.

- Drove the first production launch of the Real Estate vertical, coordinating across a newly formed team under tight deadlines to deliver on stakeholder commitments, going live at 2:30 AM after a week of intensive sprints.
- Upheld engineering quality standards through rigorous code reviews, mentoring junior engineers, and establishing coding practices for a team that was largely new to the codebase and the domain.
- Worked closely with a talented cross-functional team in a fast-moving environment, contributing to a culture of ownership and accountability during a critical growth phase for the company.

Core stack: AngularJS · JavaScript · PHP

Flipkart.com

Software Engineer

August 2014 - March 2015 (8 months)

Flipkart is India's largest e-commerce platform. I joined the Checkout team at one of the most exciting and demanding periods in the company's history, contributing to a platform handling millions of transactions at massive scale.

Key contributions:

- Contributed to the Checkout platform, working on bug fixes and incident response for one of the most high-stakes, customer-facing flows in e-commerce where every second of downtime directly impacts revenue.
- Was part of the engineering war room during Flipkart's first ever Big Billion Day sale, one of India's largest online shopping events, spending 3 days on-site managing incidents, stabilizing the platform, and ensuring checkout continuity under unprecedented traffic load.
- Gained first-hand exposure to how world-class engineering teams build and operate scalable systems under extreme pressure, a foundational experience that shaped my approach to reliability and performance engineering.

Impelsys

Software Engineer

March 2013 - August 2014 (1 year 6 months)

Impelsys is a digital publishing technology company building enterprise-grade e-learning and content platforms. As one of only 2-3 engineers on the core product team, I had broad ownership across the platform and contributed to features that were sold and customized for enterprise clients like Tata McGraw-Hill and Sesame Street.

Key contributions:

- Integrated the entire payment gateway end-to-end into the core product, enabling seamless transactions across the platform and unlocking a critical revenue stream for the business.
- Built the EMI and partial payment feature based on subscription models, adding a transformational capability that made the platform more accessible to a wider user base, earning Employee of the Quarter recognition for this contribution.
- Engineered a library model with concurrent book check-in and check-out functionality, bringing a familiar and intuitive borrowing experience to the digital publishing ecosystem.
- Contributed to enterprise client customization, adapting the core product for marquee clients including Tata McGraw-Hill and Sesame Street, gaining hands-on experience in how scalable SaaS products are tailored for diverse market segments.
- Worked in a small, high-ownership team environment that demanded full software development lifecycle ownership, from design and development through to deployment and client delivery.

Mindfire Solutions

Web Developer

June 2010 - March 2013 (2 years 10 months)

Bhubaneswar, Orissa, India

Mindfire Solutions is a software services company known for hiring selectively from top engineering colleges. I was the only candidate selected from my college, joining straight out of graduation and immediately being thrown into real client work with full ownership expectations.

Key contributions:

- Took end-to-end ownership of client projects from day one, handling the complete software development lifecycle including requirement gathering, design, development, testing, and deployment, well ahead of what most freshers are typically trusted with.
- Delivered across multiple client engagements in a fast-paced services environment, building the discipline of shipping on time, communicating with stakeholders, and maintaining quality under pressure.
- Rapidly switched across multiple technology stacks every few months, building a strong foundation of adaptability and breadth that has defined my approach to engineering ever since.

→ Worked under experienced mentors and leads who set a high bar for engineering craft, instilling practices around code quality, ownership, and continuous learning that I carry to this day.

Education

Veer Surendra Sai University Of Technology

Bachelor of Technology, Computer Science Engg. · (2006 - 2010)
