Shaury Rastogi

Software Development Engineer II, Microsoft
Delhi, India

Summary

Driven to perform in fast-paced, high-stakes environments, I thrive on cross-functional collaboration and continuous hands-on learning. I aim to set industry benchmarks by applying unconventional ideas shaped through experience. With a strong foundation in translating customer needs into scalable solutions, I specialize in end-to-end product development, AI-driven systems, prompt tuning, and real-time interaction design to deliver impactful user experiences.

Experience

Microsoft

Software Development Engineer, II
June 2022 - Present (4 years 1 month)
Noida, India

- Building SEVAL AI Agent from scratch for Office AI ecosystem, designing agent architecture and RAI evaluation workflows; implemented validation pipelines and compliant dataset handling, improving evaluation consistency and reliability org-wide
- Architected end-to-end Enterprise Playlist feature for Microsoft Copilot in Word and PowerPoint iOS, improving AI response reliability by 65% through prompt engineering and enterprise context alignment; won Microsoft Global Hackathon 2025 Innovation Award for this project
- Engineered real-time audio experience for iOS Copilot with custom UX flows and prompt-driven interactions using iOS system monitors (network, telephony, app lifecycle), achieving low latency for high-fidelity voice conversations
- Developed enterprise data extraction system using LLMs and graph database queries for intelligent information retrieval; implemented Enterprise Search with natural language processing across Copilot Word and PowerPoint mobile apps

- Built shared C++ cross-platform codebase, eliminating code duplication between Android and iOS; created reusable pluggable modules deployed across multiple client applications
- Developed Copilot Chat History Workflow using C++, Objective-C, and Swift, enabling seamless session retrieval for millions of enterprise users with context-aware responses and session management
- Orchestrated multi-workflow AI response handling (Summary, WebChat, Key Slides, Calls to Action) from backend servers to iOS UX layer using multi-language stack
- Led First Run Experience (FRE) across all Copilot features, implementing onboarding flows, teaching callouts, and notification systems to drive feature adoption and user engagement
- Developed pen and ink capabilities for Word, Excel, and PowerPoint Windows, supporting natural handwriting recognition and digital inking for enhanced user input
- Integrated Copilot APIs using TypeScript and React Native, demonstrating technical versatility and rapid prototyping.

Cadence Design Systems

3 years 1 month

Software Development Engineer, II

October 2020 - May 2022 (1 year 8 months)

Noida

- Designed and developed NextGen fault detection utility for Virtuoso flagship product using C++, Qt, and Cadence SKILL, deployed in autonomous vehicles and automated chip manufacturing systems
- Led full-cycle development of Parameters Grouping feature from specification through production, enabling designers to efficiently manage thousands of variables, corners, parameters, and outputs
- Benchmarked and rearchitected Legato SAFE product for fault injection and detection using C++ and Cadence SKILL, improving tool performance by 40% and enhancing usability with greater process control

- Created automated fault dropping system from scratch for multi-test setups, reducing simulation time by 60% and enabling automated confidence report generation
- Trained multiple cross-organizational teams on Squish GUI testing framework, establishing standardized testing practices
- Awarded "Exceeded Customer Expectations" for responsive client engagement, contributing to acquisition of 6 new enterprise customers for Legato solution
- Recognized as "Team Catalyst" for knowledge transfer initiatives and cross-team collaboration
- Nominated by client as "Valuable Partner" for mature defect handling and rapid resolution ensuring on-time deployment cycles
- Received "Best Code Basher" award for proactive bug identification preventing quality issues

Software Development Engineer, I
May 2019 - September 2020 (1 year 5 months)
Noida Area, India

Synopsys Inc
Software Development Engineer, I
January 2019 - April 2019 (4 months)
India

- Contributed to design space exploration tools for semiconductor design workflows
- Developed optimization algorithms for electronic design automation solutions

Cadence
Software Engineer Intern
July 2018 - January 2019 (7 months)

- Developed features for custom IC design tools supporting advanced semiconductor packaging
- Collaborated with senior engineers on PCB design automation workflows

STMicroelectronics
Project Trainee

January 2018 - July 2018 (7 months)

Greater Noida

Automated tool for Covalidation Database and Report generation

A complete backend to front end packaged tool consisting of fetching contents from server

automatically and thereby after carrying out multiple processing over the DK, technology-library

data running GDS and CDL for the same. Also included automated report generation feature with

the ease of one click making use of python and shell scripting.

Creators- Inspire to Create, Multidisciplinary Society of Northern India Engineering College

Founder President

May 2015 - May 2018 (3 years 1 month)

Northern India Engineering College, Delhi

Founded the first multidisciplinary society of the college, wherein an amalgamation of all branches including CSE, ECE, MAE, IT works together to quench the thirst of the inner innovators.

Together we have worked on a no. of projects including UAVs (quadcopters), gesture controlled robots, IOT based home automation, dynamic app development and website development.

Technical workshops on embedded systems, C sharp, HTML were carried out to keep the spark of innovation ignited in all the curious minds. Personality development sessions are also carried out amongst the members in order to push one's fears on stage presence, interview phobias etc.

Indian Oil Corporation Limited

Research Trainee

June 2017 - August 2017 (3 months)

Indian Oil Bottling Plant

Northern India Engineering College

Assistant General Secretary - INNOVIZ

February 2017 - March 2017 (2 months)

New Delhi Area, India

Served as the Assistant General Secretary of the Annual Cultural cum Techno fest INNOVIZ of Northern India Engineering College. Gained experience of event management, logistics, accounts, designing and overall handling of the fest.

Dimension Data

Intern

June 2016 - August 2016 (3 months)

New Delhi Area, India

Worked here as an intern, wherein got exposure to the networking arena of IT industry.

Got hands on experience on various servers, switches and routers especially on Cisco Catalyst 3750 series. Learnt working of VoIP phones, Cisco Unified Call Manager (CUCM) and the IOS.

IBM

3 months

Intern

July 2015 - August 2015 (2 months)

New Delhi Area, India

Took industrial training on Big Data and IBM Hadoop, where learnt concepts of data management, JQuery, JQL and Hive. Also learnt to work on VMWare. Grasped some key concepts of IBM Worklight as well.

Trainee

June 2015 - August 2015 (3 months)

New Delhi Area, India

Underwent intensive training on Advanced Embedded Technologies at IBM training center WebTek Labs.

Education

Guru Gobind Singh Indraprastha University

Bachelor of Technology, Electrical, Electronics and Communications Engineering · (2014 - 2018)

Amity International School

AISSE, 10+2 · (2012 - 2014)
