1. Part of the Allocation & Pricing team, working as a backend engineer, developing systems to enhance fulfilment rate while ensuring accurate pricing.
2. Designed and built a flexible allocation layer from scratch, making the structure generic to accommodate different driver ranking strategies, resulting in a ~3% increase in fulfillment and a ~1% reduction in cancellations after driver assignment.
3. As part of a squad aiming to reduce downtime and latency, collaborated to migrate a critical API from Ruby on Rails to a new micro-service in Kotlin, resulting in a 68% decrease in P99 latency.
4. Optimized Redis read query times from up to 600ms to approximately 15ms by implementing pipeline batching, reducing network round-trip overhead and achieving a ~97% improvement.
5. Point of contact for all things central to the Pricing System, independently managed contract closure, development, and testing, while also leading documentation and maintenance for the pricing micro-service.
