# Pushyanth Soma

SDE II at Microsoft, Ex-Amazon  
India

## Summary

Experienced Software Engineer with a demonstrated history of working in the broadcast media industry. Skilled in Scala, Python, AWS for development, Java, HTML, Leadership, Object-Oriented Programming (OOP), and Angular 4. Strong engineering professional with a Engineer's Degree focused in CSE from Sreenidhi Institute of Science and Technology.

## Experience

### Microsoft

3 years 6 months

#### Software Engineer II

December 2024 - Present (1 year 7 months)

Hyderabad, Telangana, India

#### Software Engineer

January 2023 - November 2024 (1 year 11 months)

Hyderabad

- Led end-to-end zero-downtime migration from Azure Media Services (AMS) to Bitmovin for VOD across 150+ live enterprise instances; replaced vendor-locked AMS transcoding with open-source FFmpeg by developing custom PowerShell and Shell scripts for automated multi-bitrate transcoding and one-click OSS deployment; and engineered a repackaging pipeline to convert legacy assets to standard streaming formats for players including Shaka, eliminating recurring licensing costs.
- Recovered approximately \$5,000 USD in lost revenue by subscribing to the billing Event Hub across 12 internal subscriptions, identifying upstream discrepancies, backfilling missing billing events, and resolving the root cause to prevent future revenue leakage.
- Developed an AI-powered Content Summarization feature using Azure AI services to auto-summarize course video and audio files for learner quiz preparation; demonstrated to leadership earning roadmap inclusion and authored design documentation to guide productionization.

- Delivered the complete front-end Create workflow for new service instances including input validation, multi-menu UI, and GA release setup, independently leading all portal UX with no additional team support.
- Hardened application security by integrating Virtual Networks (VNet) and configuring Private Endpoints for Key Vault and Redis; disabled public web app access, routing all traffic exclusively through Azure Front Door.
- Led resolution of a critical Microsoft Security Response Center (MSRC) case by patching SDK vulnerabilities, implementing token leakage prevention, and upgrading dependencies to ensure customer data safety.
- Migrated the Community Training portal to Azure Portal SDK v2 with zero downtime; implemented GA deprecation messaging, restricted instance creation controls, and resolved multiple Linux-based build machine migration issues.

## Amazon

### Software Development Engineer

May 2021 - December 2022 (1 year 8 months)

Hyderabad

- Designed and deployed serverless microservices using AWS Lambda and Step Functions to orchestrate complex asynchronous workflows, replacing legacy polling mechanisms and improving system responsiveness.
- Managed and provisioned production infrastructure using CloudFormation YAML IaC scripts, ensuring consistent environment replication and reducing manual provisioning errors.
- Integrated Amazon SQS and SES to decouple upstream and downstream services, enabling high-throughput event ingestion and automated customer notification workflows without throttling.
- Resolved Step Function timeout misconfigurations, eliminating a chronic source of false alarms and on-call tickets and improving overall team operational health.
- Authored capacity planning reports based on Transactions Per Second (TPS) deep-dive analysis, right-sizing DynamoDB throughput and compute resources for peak operational loads.
- Resolved high-severity SEV-2 production incidents and fixed integration test failures on CI/CD pipelines, enabling continuous deployment across the team's service portfolio.

## YuppTV Inc.

## Software Engineer

July 2019 - May 2021 (1 year 11 months)

Hyderabad

- Handled the backend for product listing page in Ruvvy (live-streaming e-commerce platform)
- Implemented Apache Kafka event pipelines for asynchronous processing of user inventory updates and course progress tracking, ensuring eventual consistency across distributed data stores.
- Integrated Elasticsearch to offload complex search queries from primary databases, significantly improving data retrieval latencies across the platform.
- Deployed Redis caching layer using the Jedis library for frequently accessed data, reducing database load and improving response times for high-traffic endpoints.
- Designed normalized schemas for PostgreSQL using Slick ORM and implemented NoSQL solutions using MongoDB to handle unstructured data requirements.
- Integrated third-party APIs including Razorpay for payments, AWS SNS and Kaleyra for SMS and email notifications, and AWS S3 for media object storage.

## Infosys

Intern

February 2019 - May 2019 (4 months)

Mysore

Worked as full time full stack development intern. Worked with Angular 4, REST API, Spring, SQL

## Research Center Imarat

Intern

May 2018 - May 2018 (1 month)

Hyderabad Area, India

---

## Education

Sreenidhi Institute of Science and Technology

Engineer's Degree, CSE · (2016 - 2019)

Govt. Polytechnic College

Diploma in Computer engineering · (2013 - 2016)

Gowtham model school

SSC · (2012 - 2013)
